THE INFINITY RESEARCH

37

**Questions to help buyers
of online samples**

Purpose and Scope

This set of questions offers a framework for buyers to use when evaluating the offerings of different online sample providers. The questions identify the key issues to consider, introduce consistent terminology, explain why each question should be asked, and note the issues buyers should expect to be covered in an answer. The intended use of these questions is that they form a basis for a conversation between buyer and sample provider, rather than simply being used as a checklist to compare offerings across providers.

The questions do not cover B2B samples, nor do they attempt to cover specific requirements for different types of research such as pricing, new product development, ad testing etc.

When online access panels were first introduced in the 1990s, the model was relatively simple: a buyer provided sampling specifications to a panel owner who drew a sample (from that panel). Over the intervening 25 years, online sample selection has changed in two fundamental ways. First, buyers can now access a a broader set of sources that now includes participants in loyalty programmes and rewards communities within “Get Paid To” sites, customer lists, intercepts from offer walls, affiliate networks, social media, and other platforms, as well as traditional panels that may or may not be owned by the provider. Second, buyers have the option to access these sources directly via self-service tools, rather than relying on a sample provider to generate the sample on their behalf.

There have been other important changes as well. Online research has become truly global and mobile devices have become a common data collection platform. The use of online samples has broadened beyond surveys to include qual/quant applications, communities, passive data collection, and so on. Concerns about privacy and data protection have led to a much-changed regulatory environment that imposes new requirements on both sample buyers and sample providers. Quality assurance techniques have become increasingly sophisticated. As a consequence, the number of issues that buyers must consider when choosing a sample provider has increased substantially.

Finally, sample quality is an essential component of all research but it alone does not guarantee reliable, actionable results. While not covered in this document, we note that a well thought out research design; a clear definition of the target population; a questionnaire that is both easy for participants to complete and accurately measures key variables; and a well-designed analysis plan are also essential.

Company Profile

1. What experience does your company have in providing online samples for market research? How long have you been providing this service? Do you also provide similar services for other uses such as direct marketing? If so, what proportion of your work is for market research?

Over the past four years, **Infinity** has worked to enhance both qualitative and quantitative data collection. Our platform has been specifically created to tackle the unique problems that your business and profession face. By using our distinctive panels, we provide services to more than 100 clients globally and more than 60 countries. By modelling quality control, paying close attention to detail, and ensuring complete client satisfaction, we have advanced in these companies.

We have collaborated with well-known media outlets, public relations agencies, digital end users, and market research businesses. **Infinity Research** works with esteemed clients on more than 2000 online projects annually and distributes samples in more than 45 international markets.

Among the online panels we offer are those belonging to certain technology brands and types; health and patient panels; professional medical; students and retirees; media consumers of movies, TV shows, and games; brand loyalists in food and beverage; mothers of infants and young children; various B2B audiences; and many more.

The Infinity Research team of enthusiastic market research experts is committed to assisting companies of all kinds in realising their greatest potential. We don't just gather data; we dig deep to find the diamonds that hide information about customer motivations, rival dangers, and new opportunities.

This is what sets us apart:

- **Unwavering Commitment to Quality:** To guarantee the precision and dependability of our findings, we use strict procedures and the most up-to-date research instruments.
- **Tailored Solutions:** We recognise that every company has distinct requirements, so we create research strategies that are specifically tailored to your objectives and problems.
- **Actionable Infinity:** We don't merely offer data; we also convert it into succinct, understandable suggestions that you can quickly put into practice and monitor your progress against.
- **Collaborative Partnership:** We maintain open lines of communication and a thorough grasp of your needs by working closely with you throughout the study process.

Whether you're launching a new product, entering a new market, or simply fine-tuning your marketing strategy, we offer a comprehensive suite of services to empower your decision making.

2. Do you have staff with responsibility for developing and monitoring the performance of the sampling algorithms and related automated functions who also have knowledge and experience in this area? What sort of training in sampling techniques do you provide to your frontline staff?

Infinity Research team of research analysts, data scientists, and engineers is committed to creating, observing, and enhancing the functionality of our automated functions and sampling algorithms. With their extensive knowledge of statistical methodologies and sample procedures, this team is always striving to make sure that our systems are generating representative, high-quality data.

To make sure that our procedures adhere to the most recent industry standards, we collaborate not only with our internal team but also with outside specialists in sample and survey technique.

We offer a range of sample method training sessions to our frontline staff. In addition to covering more complex subjects like cluster and stratified sampling, these programs also cover the fundamentals of probability sampling. Using our sample software and deciphering the outcomes of our sampling techniques are other topics covered in the course

3. What other services do you offer? Do you cover sample-only, or do you offer a broad range of data collection and analysis services?

Infinity Research is aware that different businesses require different kinds of market research. For this reason, we provide more than just sample selection; we also provide a wide range of data collection and analysis services.

Here's what we can provide:

Sample-only services: We may be your reliable partner for premium, representative samples catered to your particular target market if you have your own questionnaire and data analysis team.

Full-service market research: We can manage every step of the process for you, including creating the survey instrument, gathering information, interpreting the findings, and providing useful advice.

This comprises:

- **Survey programming and design:** We can assist you in creating efficient surveys that collect the data you require.
- **Data collection:** We provide a range of techniques for gathering data, such as phone interviews, in-person interviews, and online surveys.

- Data analysis: To find important trends and Infinity, our team of data scientists will use cutting-edge methodologies to examine your data.
- Reporting: Your findings will be presented in an easy-to-read, succinct report that you may use as a guide.

Sample sources and Recruitment

What this section is about

Answers to the questions in this section will help you understand the types of sample available from different sample providers in the market and the sources they rely on. This will help you evaluate the quality of the sample being offered, whether it is suitable for measuring change over time, and whether there are any specific constraints you need to consider when using it. It will also allow you to understand whether the sample provider is drawing the sample from its own sources or aggregating sources from other providers. We recommend that you first identify the sample types being offered and then ask the relevant questions for all sources.

Broadly speaking, there are two models of sample sources and recruitment:

Panels

These are databases of potential participants who declare that they will cooperate for future data collection if selected, generally in exchange for a reward/incentive. This includes traditional access panels, co-branded panels, or opt-in databases of individuals who agreed to complete research projects and also undertake other non-market research activities (watch ads, download an app, complete marketing offers, etc, also known as loyalty programmes, or rewards communities within GPT (Get paid to) sites.) Loyalty card and subscription databases are included here if there is a continuous relationship with members who understand the commitment asked of them.

Intercepts

This includes intercepts from offer walls, affiliate networks, social media or other platforms to drive traffic to a survey. Intercept is an approach where potential participants are asked to take a survey for a reward while they are engaged in another activity such as playing an online game, reading news, or some other online activity. Intercepted participants may be previously unknown to the sample provider or may have been pre-identified and profiled through a prior survey experience.

4. Using the broad classifications above, from what sources of online sample do you derive participants?

The Infinity Research provide samples that come from a single source, like our inhouse, exclusive panel(Proprietary panel). We combine/blend individuals from various sample sources by utilising a variety of platforms and technologies. When visiting difficult-to-reach companies, we occasionally may enlist the assistance of other suppliers. With the client's permission, we will obtain the best sample for them. We are transparent with our clients about the caliber of the samples we offer. will obtain the

best sample for them. We are transparent with our clients about the caliber of the samples we offer.

5. Which of these sources are proprietary or exclusive and what is the percent share of each in the total sample provided to a buyer? (Assume proprietary to mean that the sample provider owns the asset. Assume exclusive to mean that the sample provider has an exclusive agreement to manage/provide access to sample originally collected by another entity.)

Every source comes from **Infinity** in-house proprietary panel. In the event that we are unable to proceed with the study on our own, we obtain the clients' permission to conduct it on another panel. Every project is therefore managed solely by us.

6. What recruitment channels are you using for each of the sources you have described? Is the recruitment process 'open to all' or by invitation only? Are you using probabilistic methods? Are you using affiliate networks and referral programs and in what proportions? How does your use of these channels vary by geography?

Infinity Recruitment channels for Online Survey- We use multiple sources to recruit Panelist on our end.

- For the starter we work on social media platforms (e.g., Instagram, Facebook, Twitter, LinkedIn) for targeted advertisements and organic outreach.
- Survey panels and online communities related to target demographics.
- Email newsletters to existing customers or subscribers.
- In-app or website pop-ups for users already engaging with your brand online.
- Our panel is "open to all," but in order to rectify that they are first-time users, panelists must double-opt in with their email.

Yes!! We definitely use **PROBABILISTIC METHOD** it is done to remove the biased from the survey offerings, selecting a random subset of the population to ensure every individual has an equal chance of being included in the sample help us when dealing with uncertainty and variability in data, allowing researchers to quantify the likelihood of different outcomes and make informed decisions. To make recruitment fun we offer lot of rewards to our panellist through different modes and create referral programs through offering incentives or rewards to both referrers and referees (those referred) can incentivise participation and increase the likelihood of referrals. The geography does not create any differentiation in rewarding view point.

7. What form of validation do you use in recruitment to ensure that participants are real, unique, and are who they say they are? Describe this both in terms of the practical steps you take within your own organisation and the technologies you are using. Please try to be as specific and quantify as much as you can.

The Infinity Research have the importance of authentic, high-quality data in the constantly changing field of market research cannot be overstated. Infinity approach to achieving unparalleled data quality at every juncture, fortified by innovative technology, strategic design, and collaborative expertise. The involvement of sincere respondents is the first step in our commitment. By utilising cutting-edge technology and analytics, we address issues brought about by dishonest participants, setting the stage for objective, meaningful outcomes. Our commitment also includes creating well considered, mobile-friendly questionnaires that guarantee each response is truthful and perceptive. Collaboration is more than simply a virtue at Infinity; it's our guiding principle. Through the exchange of ideas and best practices, our combined knowledge promotes lower error rates and an improved research experience.

How does we identify Genuine Respondents

Our panelists must first access the link to our main panel and register in same, then we provide respondent with selected survey and finish the registration checks. Then we create a demo survey to get pre-survey checks and then the respondent takes the selected survey. if the respondent quality score is good, then the respondent will validate and confirm the email through double opt-in and will be able to take any further surveys through automated inspections and real-time monitoring, we assess responder activity and translate data points into unique quality scores. These ratings decide the respondents' continued eligibility for surveys. We check data quality in real time using sophisticated algorithms, artificial intelligence, and machine learning with data quality assessment in market research can significantly enhance the accuracy and efficiency of Infinity gathered. We regularly monitor the behaviour of the respondents, modifying their individual quality scores in light of their contributions. Anyone who doesn't fit our requirements will be automatically precluded from any further surveys.

8. What brand (domain) and/or app are you using with proprietary sources? Summarise, by source, the proportion of sample accessing surveys by mobile app, email or other specified means.

Infinity uses its in-house domain, ensuring that all data remains secure and within our control. This approach allows us to provide a tailored and efficient service, reducing latency and improving overall performance. By maintaining our own infrastructure, we can swiftly address any issues that arise and implement updates without relying on external vendors. This not only enhances reliability but also ensures that our clients' needs are met with precision and care.

9. If offering intercepts, or providing access to more than one source, what level of transparency do you offer over the composition of your sample (sample sources, sample providers included in the blend). Do you let buyers control which sources of sample to include in their projects, and if so how? Do you have any integration mechanisms with third-party sources offered?

In **Infinity Research**, transparency regarding the composition of the sample is crucial for ensuring the quality and reliability of research findings. When offering intercepts or access to multiple sample sources, it's important to provide transparency to clients about the sources and providers included in the sample blend. Here's how this transparency and control over sample sources can be implemented:

1. Transparency in Sample Composition:
 - Provide detailed information about the sources from which the sample is drawn, including demographics, geographic locations, and any other relevant characteristics.
 - Disclose the specific sample providers or vendors included in the sample blend, along with their methodologies and quality assurance measures.
 - Clearly communicate any potential biases or limitations associated with each sample source to clients, allowing them to make informed decisions.
2. Client Control Over Sample Sources:
 - Offer clients the flexibility to specify their preferences regarding sample sources based on their research objectives and target audience.
 - Provide tools or platforms that allow clients to customize their sample blends by selecting or excluding specific sample sources according to their requirements.
 - Enable clients to set criteria or filters for sample selection, such as demographic attributes or behavioural characteristics, to ensure that the sample meets their specific needs.
3. Integration with Third-Party Sources:
 - Offer integration mechanisms with third-party sample sources to augment the available options and provide clients with access to a wider range of potential participants.
 - Ensure seamless integration between the research platform and thirdparty sources, allowing for efficient data collection and management.
 - Implement robust data validation and quality control measures to maintain consistency and reliability when integrating data from multiple sources.

By offering transparency over sample composition, providing clients with control over sample sources, and integrating with third-party sources where appropriate, market research providers can enhance the credibility and effectiveness of their research offerings. This transparency and flexibility empower clients to make informed and customize their research projects to suit their specific needs and objectives.

10. Which model(s) do you offer to deliver sample? Managed service, self-serve, or API integration?

The Infinity Research mostly work in Self-serve and API integration to deliver sample data swiftly and efficiently. Our self-serve platform allows users to easily access and manage their data needs without the need for extensive technical support. Not only does it simplify the procedure, but it also expedites our job. Our services consist of nothing more than expediting the process of obtaining flawless data for our clients, who are constantly striving to enhance their methods in order to regain the confidence of the audience. Meanwhile, our robust API integration ensures that businesses can seamlessly incorporate our data solutions into their existing systems, enhancing their operational capabilities. Whether you are a startup looking to scale rapidly or an established enterprise aiming to optimize your processes, our services are designed to be flexible and scalable to meet your unique requirements. By leveraging cutting-edge technology and a customer-centric approach, we strive to provide unparalleled value and support to our clients.

11. Of the sample sources you have available, how would you describe the suitability of each for different research applications? For example, Is there sample suitable for product testing or other recruit/recall situations where the buyer may need to go back again to the same sample? Is the sample suitable for shorter or longer questionnaires? For mobile-only or desktop-only questionnaires? Is it suitable to recruit for communities? For online focus groups?

Infinity sample sources may vary in their suitability for various research applications. Here's how you might assess the suitability of sample sources for different research scenarios:

1. Panel Sample

- **Product Testing:** Panel samples can be suitable for product testing, especially if the panel consists of engaged participants who are willing to provide feedback on products or services.
- **Recruit/Recall:** Panel samples are often well-suited for recruit/recall situations, as panel members can be recontacted for follow-up studies or longitudinal research.
- **Questionnaire Length:** Panel samples can accommodate both shorter and longer questionnaires, depending on the level of engagement and incentive structure.
- **Device Compatibility:** Panel samples may include participants with both mobile and desktop devices, making them suitable for surveys administered on either platform.
- **Community Recruitment:** Panel samples can be used to recruit participants for online communities or forums, providing a pool of engaged individuals with common interests or demographics.

- Online Focus Groups: Panel samples can be leveraged for recruiting participants for online focus groups, ensuring a diverse and representative group of participants.

Sampling And Project Management

What this section is about

Answers to the questions in this section will help you understand the processes and procedures that are undertaken to provide you with a sample of participants for your survey. You should understand what biases may be inherent in, or as a result of, the approaches taken and the likely severity of those biases.

12. Briefly describe your overall process from invitation to survey completion. What steps do you take to achieve a sample that “looks like” the target population? What demographic quota controls, if any, do you recommend?

The overall process from invitation to survey completion involves several key steps to ensure a sample that closely resembles the target population:

1. Invitation and Screening:

- **Infinity** Invites potential participants to take part in the survey via email, social media, or other channels.
- Screen participants using pre-defined criteria to ensure they match the demographic profile of the target population.

2. Informed Consent and Introductory Information:

- Provide participants with information about the purpose of the survey, expected duration, and any incentives for participation.
- Obtain informed consent from participants to ensure ethical participation in the research through Infinity.

3. Survey Administration:

- Administer the survey using an online platform or other data collection methods.
- **Infinity** ensures that the survey is user-friendly, with clear instructions and questions that are relevant to the research objectives.

4. Data Quality Checks:

We implement measures to monitor data quality, such as attention checks and validation questions, to ensure the integrity of responses. Remove or flag responses that do not meet quality standards or appear to be inconsistent or fraudulent.

5. Data Analysis:

- We analyse the survey data to identify patterns, trends, and Infinity relevant to the research objectives.
- Use statistical techniques to summarise and interpret the findings, considering the demographics of the sample and how they compare to the target population.

To achieve a sample that "looks like" the target population, consider the following strategies:

- Stratified Sampling: Divide the population into homogeneous groups based on relevant demographic characteristics (e.g., age, gender, income) and sample proportionately from each stratum to ensure representation.
- Quota Sampling: Set quotas for key demographic variables based on the target population's composition (e.g., 50% male, 50% female) and monitor the sample composition to ensure quotas are met.
- Weighting: Apply weighting techniques to adjust the survey data to match the demographic profile of the target population if there are discrepancies between the sample and population characteristics.

13. What profiling information do you hold on at least 80% of your panel members plus any intercepts known to you through prior contact? How does this differ by the sources you offer? How often is each of those data points updated? Can you supply these data points as appends to the data set? Do you collect this profiling information directly or is it supplied by a third party?

The Infinity Research collects profiling information directly from panel members or through third-party sources such as demographic data providers. This information often

includes demographics like age, gender, income level, education level, geographic location, occupation, household size, and possibly more specific data related to interests, purchasing behaviour, or lifestyle choices.

This detailed profiling helps us to ensure that the Infinity we gather are as accurate and comprehensive as possible, enabling us to create more tailored and relevant experiences for our users. By understanding the diverse backgrounds and preferences of our audience, we can better serve their needs and anticipate emerging trends.

Furthermore, we take privacy and data protection seriously. All the data collected is securely stored and handled in compliance with relevant regulations and industry standards. Our commitment to transparency means that panel members are always informed about the types of data being collected and how it will be used. We prioritise building trust with our community by giving them control over their personal information and ensuring that their participation is both meaningful and respected.

In doing so, we strive to create a more connected and informed world, where the voices and perspectives of individuals are heard and valued.

By leveraging this wealth of information, we can also foster innovation and drive positive change. Our Infinity not only help businesses and organizations to refine their strategies and offerings but also empower individuals by reflecting their needs and aspirations in the products and services they use daily.

Moreover, we are continuously exploring new ways to enhance the value and impact of the data we collect. Through advanced analytics, machine learning, and artificial intelligence, we can uncover deeper patterns and Infinity, further enriching the user experience and contributing to meaningful advancements across various sectors.

As we move forward, our dedication to ethical data practices remains unwavering. We are committed to maintaining the highest standards of integrity, confidentiality, and respect for privacy. By doing so, we aim to build a lasting partnership with our panel members, based on mutual trust and shared goals.

Together, we can harness the power of data to create a brighter, more inclusive future, where everyone's voice contributes to the collective story of our world.

14. What information do you need about a project in order to provide an estimate of feasibility? What, if anything, do you do to give upper or lower boundaries around these estimates?

To get the project accomplished correctly **Infinity** would like to know about Target Audience that includes demographic characteristics (age, gender, income, education, etc.), geographic location, and any other relevant segmentation criteria along with the desired sample size, sampling method, Device compatibility and any specific criteria for selecting participants. Having the budget and Timeline would be a easier way to give feasibility fast and efficiently.

15. Do you employ a survey router or any yield management techniques? If yes, please describe how you go about allocating participants to surveys. How are potential participants asked to participate in a study? Please specify how this is done for each of the sources you offer.

Infinity involves utilising Survey Router techniques to direct participants to specific surveys based on their demographic profiles or other relevant criteria. By serving as a mediator between participants and various surveys, this method effectively guides participants to surveys that match their characteristics. It is commonly used to efficiently assign participants to surveys based on demographics, interests, or other relevant criteria, ensuring that participants are invited to surveys that align with their profile, thereby increasing response rates and data quality.

Participant Allocation:

Profile Matching: Participants' profiles, which include demographic details, past survey engagement, and other pertinent information, are compared against survey requirements. Participants are then steered towards surveys that match their characteristics.

Randomisation: In instances where participants qualify for multiple surveys, a survey router may use randomisation algorithms to distribute participants fairly among the surveys.

Prioritisation: Certain surveys may be prioritised based on factors like urgency, project significance, or strategic goals.

Inviting Potential Participants:

Email Invitations: Potential participants are commonly invited via email to partake in surveys. These emails typically outline the survey's purpose, duration, and incentives for participation.

Website or Portal Notifications: Participants visiting the **Infinity** panel's website or portal may encounter notifications encouraging them to participate in available surveys, often appearing as pop-ups or banners for easy access.

SMS Invitations: In some instances, participants may receive text messages inviting them to take part in surveys, containing a brief survey overview and a link for access.

16. What do you do if the project proves impossible for you to complete in field? Do you inform the sample buyer as to who you would use to

complete the project? In such circumstances, how do you maintain and certify third party sources/sub-contractors?

Infinity is committed to transparency with our clients. If a project is deemed unfeasible, we will promptly inform our clients about its status. Should we need to utilize alternative panel sources, we will seek approval from our clients. In such cases, we will personally manage the project, engaging external sources or panels through our rigorous internal screening process to guarantee that the right individuals are assigned to the appropriate project.

17.Do you set limits on the amount of time a participant can be in the router before they qualify for a survey?

Yes, imposing time limits on participant router usage before survey qualification is a common practice in **Infinity Research**. These limits are typically enforced to prevent participants from aimlessly browsing surveys without actively engaging. Time limits can vary based on the research panel's guidelines and survey complexity. Common strategies for setting time limits include:

- 1.Session Duration Limits: Participants are allocated a specific time, like 10 or 15 minutes, to explore surveys and qualify. If no survey is completed within this timeframe, participants are redirected out of the router.
- 2.Activity-Based Limits: Participants must actively engage with qualification questions or survey options within a set period. Failure to do so results in redirection or a prompt to revisit the router later.
- 3.Dynamic Time Limits: Time limits are adjusted based on factors like survey availability, participant activity, or router traffic. This adaptive approach ensures fair chances for survey qualification, especially during peak usage times.

18.Do you allow participants to choose a survey from a selection of available surveys? If so, what are they told about each survey that helps them to make that choice?

Enabling participants to select a survey from a range of options is a commonly used in **Infinity**. When participants are given this choice, they are typically provided with detailed information about each survey to facilitate an informed decision-making process. Before participants commence the survey, they are informed about the survey topic, estimated time required, potential incentives or rewards, and the confidentiality measures in place.

This level of transparency plays a vital role in fostering trust and ensuring that participants have a clear understanding of the survey process.

19.What information about a project is given to potential participants before they choose whether to take the survey or not? How does this differ by the sources you offer?

When considering whether to participate in a survey, potential respondents are generally presented with essential project details to facilitate an informed decisionmaking process. This information typically includes Infinity into the survey's purpose, anticipated time commitment, and any incentives available for participation. The specifics of this information can vary based on the recruitment source. Here is a breakdown of how it may differ across various platforms in [The Infinity Research](#):

[In Online Panels:](#)

- **Survey Overview:** Participants receive a concise summary of the survey, outlining its subject matter and objectives to align expectations with their interests.
- **Estimated Time:** An approximation of the survey duration is provided to enable participants to assess their availability for participation.
- **Incentives:** Details regarding any rewards or incentives for survey completion, such as cash rewards, gift cards, sweepstakes entries, or loyalty points, are communicated. **Confidentiality:** Participants are assured of the confidentiality of their responses and informed about data usage and protection measures.
- **Opt-Out Option:** Participants are informed of the voluntary nature of participation, emphasising their freedom to decline or withdraw without consequences.

[In Email Invitations:](#)

- **Subject Line:** The email subject line offers a brief Infinity into the survey topic to capture the recipient's interest.
- **Survey Introduction:** The email body contains a more detailed survey introduction, covering its purpose, time estimate, and available incentives.
- **Call to Action:** A clear call to action prompts recipients to access the survey via a provided link, directing them to a landing page or directly to the survey platform.

[In Social Media Posts:](#)

- **Engaging Graphics:** Eye-catching visuals or videos are often included to attract attention and generate interest in the survey.
- **Brief Description:** A concise overview of the survey's topic and goals, coupled with a call to action, encourages user participation.
- **Easy Access:** Direct survey links are shared for effortless participant access. **Incentives Highlighted:** Emphasis is placed on incentives or rewards to entice potential respondents effectively.

Irrespective of the recruitment platform, the objective remains consistent: to offer transparent, compelling, and easily digestible information to potential participants, motivating engagement while ensuring a clear understanding of expectations.

20. What ability do you have to increase (or decrease) incentives being offered to potential participants (or sub-groups of participants) during the course of a survey? If so, can this be flagged at the participant level in the dataset?

Infinity can influence the incentives provided to potential participants, either to boost participation rates or engage specific participant sub-groups. Here's an overview of how this process generally unfolds:

Adjusting Incentives:

- **Monitoring Participation Rates:** Infinity team monitor participation rates during the survey process. If rates are lower than anticipated or specific sub-groups are not responding as expected, incentives may be revised.
- **Modifying Incentive Levels:** Based on participation trends, Infinity team may increase or decrease incentives. This could involve raising monetary rewards, offering bonus points, sweepstakes entries, or other incentives like gift cards.
- **Targeting Sub-Groups:** Tailored incentives may be offered to specific participant subgroups to enhance response rates. For example, certain demographic or behavioural groups might receive increased incentives to encourage their involvement.
- **Ethical Considerations:** Our team ensure that incentives are fair and reasonable, avoiding coercion or undue influence on participants.
- **Flagging at the Participant Level:** Adjustments to incentives can be monitored at the participant level in the dataset. Our team can track which incentives participants received and when they were provided. This data enables a detailed analysis of how incentives impact participation rates and survey completion.

21. Do you measure participant satisfaction at the individual project level? If so, can you provide normative data for similar projects (by length, by type, by subject, by target group)?

Infinity typically assess participant satisfaction on a project-by-project basis, a practice not commonly adopted by others. However, the focus remains on comprehensively evaluating participants' overall experiences and pinpointing areas for enhancement.

Methods for Assessing Participant Satisfaction:

1. **Post-Survey Feedback:** Following the conclusion of a survey or research endeavour, participants can be prompted to share feedback on their engagement. This feedback may be gathered through post-survey questionnaires, interviews, or feedback forms.

Key Metrics: Essential metrics used to gauge participant satisfaction encompass overall contentment ratings, willingness to engage in future research, survey completion ease, perceived fairness of incentives, and satisfaction with survey length and content.

Qualitative Feedback: Beyond numerical assessments, qualitative feedback from participants offers valuable insight into specific elements of the research experience that influenced their satisfaction levels or areas of discontentment.

Normative Data for Comparable Projects: The process of furnishing normative data for projects of a similar nature involves consolidating and evaluating data from various research endeavors sharing akin attributes. These projects may encompass similar durations, methodologies (e.g., online surveys, focus groups), subject matter, and target demographics.

1. **Duration:** Projects of comparable lengths can be categorised to establish benchmarks for participant satisfaction. For instance, satisfaction levels may differ between brief surveys (e.g., 5 minutes) and lengthier surveys (e.g., 30 minutes).
2. **Methodology:** Distinct research methodologies (e.g., online surveys, face-to-face interviews) may present unique considerations impacting participant satisfaction. Normative data can be delineated for each research method.
3. **Subject Matter:** Projects addressing akin subject matter or themes may yield varying participant satisfaction levels influenced by content relevance and interest. Segmenting normative data by subject matter can accommodate these distinctions.
4. **Target Audience:** Participant satisfaction may fluctuate across diverse demographic or psychographic segments. Normative data can be stratified based on target group attributes (e.g., age, gender, geographical location) to offer insight into satisfaction patterns within each segment.

While normative data aids in benchmarking exercises, it's crucial to acknowledge that satisfaction levels can be swayed by factors beyond project parameters, encompassing survey design, communication strategies, and participant expectations. Moreover, constraints on accessing normative data may arise due to confidentiality and data privacy protocols.

22. Do you provide a debrief report about a project after it has completed? If yes, can you provide an example?

Yes, **The Infinity Research** provide a debrief report about a project after it has completed is a common practice in market research. This report summarises key findings, Infinity, and recommendations derived from the research activities.

It typically includes an overview of the project objectives, methodology, and the data collection process. Additionally, the report highlights any challenges encountered during the research and how they were addressed. Visual aids such as charts, graphs, and tables are often incorporated to present data clearly and compellingly

A well-prepared debrief report not only serves as a valuable reference for future projects but also helps stakeholders understand the impact of the research. By providing actionable recommendations, the report can guide strategic decisions and improve business outcomes. Engaging and thorough debrief reports ensure that the Infinity gained are effectively communicated and utilised, fostering a culture of continuous improvement and informed decision-making.

Introduction:

Company XYZ, a prominent fast-food chain, commissioned this study to delve into the preferences and behaviours of its target customers. Research objectives encompassed evaluating brand perception, identifying drivers of customer satisfaction, and pinpointing areas for enhancement in product offerings and customer experience.

Methodology:

The study adopted quantitative method approach, combining quantitative surveys. A sample of 1,000 consumers across various demographics and geographic regions participated in an online questionnaire.

Key Findings:

1. Brand Perception: Company XYZ is widely recognized with favorable associations of convenience, affordability, and consistent quality among consumers.
2. Customer Satisfaction: High levels of customer satisfaction were reported, with 80% expressing positive experiences, attributing satisfaction to quick service, friendly staff, and menu variety.
3. Competitive Landscape: Despite strong brand loyalty, consumers are open to exploring alternatives with unique value propositions such as healthier menu options, customisation, and sustainability practices.
4. Areas for Improvement: Opportunities for enhancing menu innovation, personalisation, and sustainability initiatives were identified to align with changing consumer preferences.

Infinity and Analysis:

1. Segmentation Analysis: Distinct customer segments were identified based on demographics, psychographics, and purchase behaviours, highlighting the need to tailor strategies and products for optimised engagement and loyalty.

2. Competitive Benchmarking: Comparisons with competitors revealed areas of strength and potential weaknesses, guiding strategies to bolster market position and distinguish Company XYZ's offerings.

Emerging Trends: Exploration of trends like plant-based options, digital ordering, and eco-friendly practices presented opportunities for innovation and differentiation in the fast-food sector.

Recommendations:

1. Menu Innovation: Introduce new items, emphasizing healthier and seasonal offerings to cater to diverse preferences and align with evolving trends.
2. Personalization Strategies: Implement customization, loyalty programs, and targeted promotions to enhance customer engagement and loyalty across segments.
3. Sustainability Initiatives: Introduce sustainable practices in packaging, sourcing, and waste reduction to resonate with consumer values and communicate transparently to build trust and loyalty.

Conclusion:

The study provides strategic Infinity for Company XYZ to improve its market position and customer satisfaction in the fast-food industry. By implementing tailored strategies based on these findings, Company XYZ can enhance its competitive edge and ensure long-term success in a dynamic market.

Data quality and Validation

What this section is about

This section focuses on the quality of the in-survey data. In-survey data quality includes project level data validity and representativeness, survey-taking behaviours, sample blends, participant characteristics, and project level data health and audit practices.

23. How often can the same individual participate in a survey? How does this vary across your sample sources? What is the mean and maximum amount of time a person may have already been taking surveys before they entered this survey? How do you manage this?

The Infinity Research endeavours to address respondent fatigue and enhance sample diversity by implementing restrictions on the number of surveys an individual can participate in within a designated period, typically a week. This practice is fundamental to maintaining the credibility and reliability of the collected data.

The frequency of survey engagement can vary across different respondent pools. The tenure of individuals in the survey-taking sphere before entering a specific survey can vary significantly. While some respondents may be seasoned survey participants actively seeking opportunities to engage, others may be novices. To accommodate this diversity, we meticulously monitor respondent activity across various surveys and platforms.

Through the utilisation of sophisticated algorithms and data analytics, Infinity Research ensures that respondents are not burdened with excessive survey requests, which could lead to rushed or inattentive responses. Moreover, we employ a variety of incentives to sustain respondent interest, such as rewards and entries into sweepstakes.

Emphasising transparency and communication with our respondents is a cornerstone of our approach. By clearly articulating the purpose of each survey and outlining how their feedback will be utilised, we cultivate trust and collaboration. This practice not only enhances the quality of the data collected but also encourages thoughtful and engaged responses from participants.

Our dedication to ethical survey practices extends beyond frequency and incentives. We prioritise safeguarding the privacy and confidentiality of our respondents. All data collected is securely stored and anonymised, ensuring the protection of personal information. This commitment not only aligns with stringent data protection regulations but also fosters a reliable relationship with our respondent base.

The Infinity Research innovative survey management strategy ensures a balanced and interactive experience for participants while delivering top-quality, dependable data for our clients. By integrating cutting-edge technology, strategic incentives, and unwavering ethical standards, we continue to set the benchmark in the realm of survey research.

24. What data do you maintain on individual participants such as recent participation history, date(s) of entry, source/channel, etc? Are you able to supply buyers with a project analysis of such individual level data? Are you able to append such data points to your participant records?

Infinity typically encompasses a diverse array of data points pertaining to individual participants, serving the purposes of survey management, data quality assurance, and client Infinity provision. This data compilation may encompass demographic particulars, response trends, and engagement metrics. Through meticulous analysis of these data sets, researchers can discern patterns, identify outliers, and bolster the precision of their conclusions. Moreover, this analytical process enables tailored followups and feedback, underscoring the importance of valuing and leveraging each

participant's input effectively. Leveraging advanced analytics and machine learning methodologies further enriches this methodology, empowering the derivation of predictive Infinity and a profound comprehension of participant behavior. Ultimately, this fosters more informed decision-making and strategic foresight. Common data points often incorporated are as follows:

1. Recent participation history: Details regarding recent survey engagements, encompassing frequency and types of surveys undertaken.
2. of entry: Participant registration dates into the survey panel or database.
3. Source/channel: Recruitment channel or sample source (e.g., online panels, social media, email campaigns).
4. Demographic information: Fundamental demographic data like age, gender, location, income, education, etc.
5. Survey responses: Participant-specific responses across conducted surveys.

Infinity frequently utilizes sophisticated proprietary database management systems for participant data storage and analysis, facilitating data aggregation and analysis at both individual and collective levels.

Regarding the dissemination of project analysis on individual-level data to clients, the feasibility hinges on multiple variables, encompassing data privacy regulations, client agreements, and the nature of the requested analysis. Depending on these factors, firms may furnish clients with aggregated Infinity and trends derived from participant data, or alternatively, offer more detailed analyses at the individual level, while ensuring compliance with privacy regulations and data-sharing agreements. Augmenting participant records with additional data points is a common strategy in the market research realm, particularly to enhance targeting and segmentation capabilities. For instance, firms may integrate external data sources such as purchase behavior data, social media engagement metrics, or third-party demographic information to enrich their understanding of the target audience. However, it is imperative for **Infinity** to uphold data privacy regulations and industry best practices when handling participant data, safeguarding individual privacy rights throughout the data collection, storage, and utilisation processes.

25. Please describe your procedures for confirmation of participant identity at the project level. Please describe these procedures as they are implemented at the point of entry to a survey or router.

In **Infinity Research**, upholding the integrity of participant identity stands as a paramount element in safeguarding data quality and dependability. Below is an outline of standard practices for validating participant identity at the project level, implemented upon survey entry:

1.Authentication Mechanisms: Authentication mechanisms are commonly employed to authenticate participant identities before granting access to surveys. This may involve participants logging in using distinctive credentials, like a username and password linked to their account.

2.Email Verification: Participants are typically required to verify their email addresses during registration. This process aids in confirming participant legitimacy and ensuring the accuracy of provided contact details.

3.CAPTCHA Verification: CAPTCHA (Completely Automated Public Turing test to tell Computers and Humans Apart) serves as a prevalent tool to deter automated bots from accessing surveys. Participants may need to solve a CAPTCHA puzzle to establish their human identity before proceeding.

Device Fingerprinting: Infinity utilizes device fingerprinting methods to recognize and monitor unique devices accessing surveys. This approach aids in detecting and preventing fraudulent activities, such as the use of multiple accounts by the same individual.

Geolocation Verification: Some surveys may necessitate participants to disclose their geographic location or leverage geolocation services to authenticate their identity. This verification helps ensure participants align with the specific demographic criteria required for the survey.

Screening Questions: Infinity surveys often integrate screening questions aimed at filtering out ineligible participants or those not meeting project-specific criteria. These questions may pertain to demographics, purchasing behaviors, or other pertinent attributes. Additionally, 1 open-ended question, designed from a test survey, provides Infinity into respondent survey-taking behavior.

7.Quality Checks: Continuous quality checks are integrated throughout the survey process to monitor participant actions and identify any suspicious or fraudulent activity. This monitoring may involve scrutinising response patterns, response times, and other relevant metrics.

8.Duplicate Detection: To preserve data accuracy, Infinity frequently implements systems to identify duplicate entries. This can entail scrutinising IP addresses, utilising digital footprints, or comparing response patterns to pinpoint and eliminate duplicate or suspicious entries.

9.Data Validation Techniques: Advanced data validation techniques are employed to ensure participant responses are coherent and logical. These methods may involve cross-referencing answers to related questions and flagging inconsistencies that could indicate fraudulent activity or misunderstood queries.

10.Randomised Control Checks: Randomised control checks are incorporated, where a subset of responses undergoes verification through follow-up questions or direct participant engagement. This practice enhances data authenticity and offers Infinity into the reliability of the participant pool.

By incorporating these protocols at the project level and upon survey or router entry, market research firms can verify the authenticity, eligibility, and qualification of participants, ensuring the provision of valuable Infinity for research projects. Furthermore, these measures fortify data integrity and reliability, culminating in more precise research outcomes.

26. How do you manage source consistency and blend at the project level? With regard to trackers, how do you ensure that the nature and composition of sample sources remain the same over time? Do you

have reports on blends and sources that can be provided to buyers? Can source be appended to the participant data records?

At **Infinity Research**, we uphold source consistency and blending through several essential practices:

Standardised Protocols: Our approach involves implementing standardised protocols to select and manage sample sources, ensuring uniformity across various projects.

Source Evaluation: We conduct regular assessments of sample sources to validate their reliability and quality. This evaluation encompasses factors such as response rates, demographic representation, and engagement metrics.

Blending Techniques: Employing advanced blending techniques enables us to merge diverse sample sources effectively. This practice facilitates the creation of a balanced mix while minimising biases.

Quality Control: We maintain data integrity through continuous monitoring and quality control procedures, including automated checks and manual reviews.

Training and Development: Our team participates in ongoing training sessions to remain abreast of the latest sample management methodologies and technologies. This commitment ensures that our practices align with industry best practices.

Feedback Mechanism: A robust feedback mechanism is in place to facilitate continuous improvement. We meticulously analyse feedback from clients and internal stakeholders to enhance our processes continually.

Ethical Standards: Upholding high ethical standards is fundamental to our operations. We adhere to legal and ethical guidelines in all data collection practices to protect the privacy and rights of respondents. For tracking studies, ensuring the nature and composition of sample sources remain consistent over time is critical. Here's how we achieve this:

Longitudinal Sampling Plans: We design longitudinal sampling plans that detail the criteria for sample selection and quotas to be maintained across different waves of the tracker.

Stable Panels: We use stable and well-maintained panels where participants are preprofiled and continuously updated to reflect demographic changes.

Source Stability Monitoring: Regular monitoring of sample sources to detect any changes in their composition or response patterns. This includes periodic audits and reassessment of the sources.

Quota Management: Strict quota management is employed to ensure demographic and behavioural characteristics remain consistent across tracking waves.

Calibration Techniques: To account for any minor variations that may arise over time, we employ sophisticated calibration techniques. These methods adjust the weights of responses to ensure that the sample accurately represents the target population.

Historical Data Analysis: By analysing historical data, we can identify trends and patterns that help us maintain consistency. This analysis provides Infinity into shifts that may occur and allows us to proactively address potential discrepancies.

7. Historical Data Analysis: By analyzing historical data, we can identify trends and patterns that help us maintain consistency. This analysis provides Infinity into shifts that may occur and allows us to proactively address potential discrepancies.
8. Transparency with Clients: We maintain open communication with our clients about our methodologies and any changes that might impact the tracking studies. This

transparency builds trust and ensures that our clients are fully informed about the integrity of their data.

9. Technological Integration: Leveraging cutting-edge technology enables us to automate tracking and monitoring processes. This integration ensures that our sample sources are consistently evaluated and aligned with research objectives.
10. Adaptive Methodologies: We remain flexible and adaptive in our approach.

As new challenges and opportunities arise, we are prepared to modify our methodologies to uphold the highest standards of data quality and consistency.

Yes, the source can be appended to participant data records. This practice allows for greater transparency and enables buyers to perform their own analyses on the impact of different sources. The appended data typically includes:

1. Source Identifier: A unique identifier for each source used.
2. Source Attributes: Information about the source, such as recruitment method, panel characteristics, and any relevant quality metrics.
3. Participant Metadata: Additional metadata about participants, like participation frequency and response behavior, to provide context and enhance data interpretation.
4. Timestamp: Detailed timestamps indicating when the data was collected from each source, ensuring temporal accuracy and enabling time-based analyses.
5. Quality Assurance Metrics: Metrics related to the quality control processes applied to each source, such as validation checks, error rates, and response consistency.
6. Source Performance Indicators: Key performance indicators (KPIs) that measure the effectiveness and reliability of each source over time, helping to identify highperforming sources and areas for improvement.

By incorporating these elements into our data records, we empower clients with a comprehensive view of their data's origin and quality. This holistic approach not only fosters trust but also enhances the overall robustness of their research findings.

In conclusion, our commitment to high standards of data integrity, transparency, and technological innovation ensures that we continuously deliver reliable and actionable Infinity. Through adaptive methodologies and thorough documentation, we uphold the trust clients place in us and contribute meaningfully to their research endeavours.

Moreover, our dedication to continuous improvement and excellence drives us to stay at the forefront of industry advancements. We actively seek out and implement the latest innovations in data collection and analysis, ensuring that our methodologies are not only current but also forward-thinking. By doing so, we provide our clients with cutting-edge tools and techniques that keep their research competitive and relevant in an ever-evolving landscape

Looking ahead, we recognise the importance of fostering a collaborative environment both within our organisation and with our clients. By encouraging open dialogue and feedback, we aim to create a shared vision of success that aligns with our clients' goals and aspirations. This collaborative spirit extends to our partnerships with technology providers, industry experts, and academic institutions, allowing us to leverage a diverse range of perspectives and expertise.

27. Please describe your participant/member quality tracking, along with any health metrics you maintain on members/participants, and how those metrics are used to invite, track, quarantine, and block people from entering the platform, router, or a survey. What processes do you have in place to compare profiled and known data to in-survey responses?

Infinity on Participant/Member Quality Tracking and Health Metrics:

1.Quality Tracking System:

Registration Validation: Verification processes during registration, such as email authentication, CAPTCHA tests, and anti-fraud measures, to ensure the accuracy of participant information.

Behavioural Monitoring: Continuous surveillance of participant behavior to detect irregularities like rushing through surveys, providing consistent responses, or displaying erratic answering patterns.

Revalidation: Periodic reassessment of participant profiles to uphold data accuracy and currency.

2.Health Metrics Management:

Response Rate: Monitoring the ratio of completed surveys to invitations as a gauge of participant engagement. Dropout Rate: Tracking participants who initiate but fail to finish surveys.

Speeding: Identifying participants completing surveys notably faster than average, indicating possible disinterest.

Straight-Lining: Noting participants who consistently choose the same response for multiple questions.

Response Consistency: Assessing response uniformity within and across surveys.

3.Utilisation of Health Metrics:

Invitation Strategy: Employing health metrics to selectively invite high-quality participants to surveys, ensuring data reliability.

Monitoring: Continuously observing participant metrics for trends and deviations, flagging those with declining quality for review.

Quarantine: Temporarily restricting participants showing suspicious or poor-quality behaviour from new surveys pending further evaluation.

Blocking: Permanently prohibiting persistently low-quality participants from the platform to uphold data integrity.

4. Enhancing Participant Experience:

Feedback Loop: Implementing mechanisms for participants to provide feedback on surveys, allowing for continuous improvement and addressing any concerns or issues they may have.

Incentive Programs: Offering rewards and recognition for consistent high-quality participation, thus motivating participants to maintain their engagement and accuracy.

Training Modules: Providing educational resources and guidelines on how to effectively participate in surveys, ensuring participants understand the importance of their contributions and how to avoid common pitfalls.

Processes for Comparing Profiled and In-Survey Data:

1. Profile Verification:

Baseline Profiling: Establishing baseline profiles during participant registration, including demographic, behavioural, and psychographic data.

Periodic Updates: Requesting participants to update their profiles periodically to capture any changes in their information.

2. In-Survey Data Comparison:

Cross-Validation: Automated processes cross-validate in-survey responses with profile data to identify discrepancies. For example, if a participant's profile indicates they are a non-smoker but they report smoking behavior in a survey, this discrepancy is flagged.

Logic Checks: Implementing logic checks within surveys to ensure consistency. Inconsistent answers trigger follow-up questions or additional validation steps.

Manual Review: For significant discrepancies, manual review processes are in place where data quality analysts investigate and determine the appropriate action, such as adjusting the profile or flagging the participant.

3. Action Based on Comparison:

Correction Requests: Participants may be asked to correct their profile information if discrepancies are detected.

Quarantine and Blocking: Participants with frequent or significant discrepancies may be quarantined or blocked, as mentioned earlier.

Feedback Loop: Feedback from these processes is used to refine and improve the profiling and validation processes continually.

28. For work where you program, host, and deliver the survey data, what processes do you have in place to reduce or eliminate undesired insurvey behaviours, such as (a) random responding, (b) Illogical or inconsistent responding, (c) overuse of item non-response (e.g., “ Don’t Know”) (d) inaccurate or inconsistent responding, (e)incomplete responding, or (f) too rapid survey completion?

To safeguard the accuracy of survey data, **Infinity** employs a variety of strategies to counteract undesirable behaviours within surveys. The following delineates our comprehensive approaches tailored to address each category of unwanted behaviour:

1.Random Responding:

Integration of Attention Check Questions: Embed specific questions throughout the survey to gauge respondent engagement, such as requiring a particular response option like "Strongly Agree." Additionally, we include open-ended questions at the beginning and end of projects to capture panelists' perspectives on the topic and assess their comprehension of the survey.

Utilisation of Pattern Detection: Deploy algorithms capable of detecting patterns indicative of random responses, such as repetitive answers or irregular response patterns.

Implementation of Pre-screening Measures: Exclude participants who exhibit inconsistencies by failing multiple attention checks from the survey.

2.Addressing Illogical or Inconsistent Responses:

Employ Logic Traps: Integrate targeted questions to unveil illogical responses, ensuring consistency and clarity in answers.

Conduct Consistency Checks: Validate responses across interconnected questions to maintain coherence, such as aligning demographic data with relevant inquiries.

Real-time Validation: Implement validation rules in real-time to promptly identify and rectify illogical responses during the survey process.

3.Mitigating Overuse of Item Non-Response (e.g., "Don't Know"):

Encouraging Responses: Structure questions to prompt engagement, providing avenues for respondents to elaborate when selecting "Don't Know."

Limiting Use of "Don't Know": Discourage consecutive selection of "Don't Know" responses to foster active participation.

Implementing Mandatory Responses: Designate critical questions as mandatory, with ethical opt-out options when applicable.

4.Managing Inaccurate or Inconsistent Responding:

Utilize Profiling and Cross-Referencing: Validate survey responses using existing profile data to ensure accuracy.

Employ Dynamic Questioning: Tailor subsequent questions based on previous responses through adaptive questioning to enhance precision.

Implement Flagging System: Introduce a mechanism to flag responses deviating from known data or survey context.

5.Addressing Incomplete Responses:

Optimize Survey Flow: Design surveys with a logical progression to minimize respondent drop-off rates.

Include Progress Indicators: Incorporate visual cues like progress bars to update respondents on survey completion status.

Issue Reminder Prompts: Provide gentle reminders for incomplete responses, encouraging thorough completion before submission.

6.Preventing Rapid Survey Completion:

Establish Minimum Time Thresholds: Set minimum time requirements for survey sections or the entire survey, flagging responses below these thresholds.

Utilize Page Timers: Implement timers to regulate time spent on each page, ensuring thoughtful responses.

Activate Speeding Alerts: Trigger alerts for rapid survey completion, indicating a need for review or further verification.

Quality Control Procedures:

Pilot Testing: Conduct preliminary tests to refine survey elements and logic before full deployment.

Automated Monitoring: Utilize automated tools for continual response monitoring, swiftly identifying and addressing undesirable behaviours.

Post-Survey Analysis: Perform thorough post-survey analyses to detect and rectify any lingering quality issues, leveraging statistical methods for anomaly detection.

Training and Guidelines: Offer clear instructions and training to emphasize the importance of accurate and thoughtful survey participation.

Continuous Feedback Loop: Establish a feedback mechanism with respondents to promptly address issues and identify improvement opportunities.

Enhancing User Experience: Regularly enhance the user interface to ensure a seamless and intuitive survey experience, reducing respondent fatigue and confusion.

Ensuring Multi-Device Compatibility: Verify the survey platform's compatibility across various devices and screen sizes to accommodate diverse respondent preferences and enhance completion rates.

Policies And Compliance

What this section is about

Sample providers, buyers, and their clients are subject to data protection and related information security requirements imposed by data protection laws and regulations. In addition, they may be subject to laws and regulations that may impact incentives paid to participants.

These laws and regulations vary by jurisdiction with different laws and regulations applying in different countries or states within countries, and are generally interpreted based on where the participant resides.

Applicable data protection laws and regulations include, but are not limited to: the Act on the Protection of Personal Information or APPI (Japan); the Australian Privacy Act (Australia); the California Consumer Protection Act or CCPA (state of California in the United States); the Children's Online Privacy Protection Act or COPPA (United States); the Data Protection Act (United Kingdom); amendments regarding data localisation requirements to the Data Protection Act (Russian Federation); the General Data Protection Law (Brazil); the EU General Data Protection Regulation or EU-GDPR (EU/EEA); the Health Insurance Portability and Accountability Act or HIPAA (United States); the Graham-Leach Bliley Act or GLBA (United States); and PIPEDA (Canada). AB 2257 (the state of California in the United States) is an example of law and regulation related to employment which may impact incentives paid to participants.

Information security frameworks and standards include, but are not limited to COBIT, HITRUST, ISO 27001, the NIST Cybersecurity Framework and SOC 2.

Answers to the questions in this section can help you understand the data protection, information security and compliance policies, procedures and practices that a sample provider has implemented.

29. Please provide the link to your participant privacy notice (sometimes referred to as a privacy policy) as well as a summary of the key concepts it addresses.

(Note: If your company uses different privacy notices for different products or services, please provide an example relevant to the products or services covered in your response to this question).

You Can Visit our Privacy Policy :

<https://theinfinityresearch.com/privacy-policy>

Feel free to review it for detailed information about how we collect, use, and protect your personal data. Your privacy is of utmost importance to us, and we are committed to ensuring that your information is handled responsibly and securely. If you have any questions or concerns, please do not hesitate to reach out to our support team. Thank you for trusting us with your information.

30. How do you comply with key data protection laws and regulations that apply in the various jurisdictions in which you operate? How do you address requirements regarding consent or other legal bases for the processing personal data? How do you address requirements for data breach response, cross-border transfer, and data retention? Have you appointed a data protection officer?

To comply with key data protection laws and regulations across various jurisdictions, **Infinity Research** implements comprehensive measures to ensure data protection and privacy. Here's an overview of how we address these requirements: Compliance with Data Protection Laws:

1.Understanding Regulations:

We continuously monitor and stay informed about data protection laws and regulations in all jurisdictions where we operate, such as GDPR in Europe,

CCPA in California, and other regional laws. We have legal experts and compliance officers who interpret these regulations and translate them into actionable policies and practices.

2.Consent and Legal Bases for Processing Personal Data:

Informed Consent: We obtain informed consent from participants before collecting any personal data. This includes clear explanations of what data will be collected, how it will be used, and participants' rights.

Granular Consent Options: Participants are provided with granular consent options, allowing them to opt-in or opt-out of specific types of data processing.

Legal Basis Documentation: We document the legal basis for data processing activities, such as consent, contract performance, legal obligation, legitimate interests, or public interest.

3. Data Breach Response:

Incident Response Plan: We have a detailed incident response plan in place for addressing data breaches. This plan includes steps for identification, containment, eradication, recovery, and communication.

Notification Procedures: We adhere to regulatory requirements for breach notifications, informing affected individuals and relevant authorities within mandated timeframes.

Continuous Monitoring: Employ continuous monitoring and intrusion detection systems to identify potential data breaches quickly.

4. Cross-Border Data Transfer:

Adequacy Decisions: Ensure data transfers are made to countries with adequate data protection laws as determined by relevant authorities (e.g., European Commission adequacy decisions).

Standard Contractual Clauses (SCCs): Use Standard Contractual Clauses approved by regulatory bodies to govern data transfers to jurisdictions lacking adequacy decisions.

Binding Corporate Rules (BCRs): Implement Binding Corporate Rules for intragroup data transfers to ensure consistent protection across all entities.

5. Data Retention:

Retention Policies: Develop and enforce data retention policies that comply with legal requirements and industry best practices.

Data Minimization: Apply data minimization principles, ensuring that only necessary data is collected and retained for as long as required to fulfill its purpose.

Secure Disposal: Ensure secure disposal and deletion of data that is no longer needed, using techniques that prevent recovery.

6. Data Subject Rights:

Access Requests: Facilitate data subject access requests, allowing individuals to obtain information about their personal data held by the organization.

Rectification and Erasure: Provide mechanisms for individuals to request the correction or deletion of inaccurate or outdated personal data.

Data Portability: Enable data portability, allowing individuals to receive their personal data in a structured, commonly used, and machine-readable format for transfer to another organisation.

Objection and Restriction: Respect individuals' rights to object to the processing of their data and to request restrictions on certain processing activities.

Transparent Communication: Maintain transparent and clear communication with data subjects regarding their rights and the procedures for exercising them.

7. Employee Training and Awareness:

Regular Training: Conduct regular training sessions for employees on data protection laws, regulations, and internal policies to ensure awareness and compliance. Phishing

Awareness: Implement phishing awareness programs to educate employees on recognizing and avoiding phishing attempts that could lead to data breaches.

Role Based Training: Provide specialized training for employees based on their roles and responsibilities, particularly for those handling sensitive data

31. How can participants provide, manage and revise consent for the processing of their personal data? What support channels do you provide for participants?

In your response, please address the sample sources you wholly own, as well as those owned by other parties to whom you provide access.

Participants can provide, manage, and revise their consent for the processing of their personal data through several channels in **Infinity**. Here's how it works for both our wholly owned sample sources and those owned by other parties:

Providing Consent Wholly Owned Sample Sources:

1. Initial Consent Forms: Participants are presented with clear and comprehensive consent forms when they first sign up or are contacted for participation. These forms detail what data will be collected, how it will be used, and their rights.
2. Online Portals: We offer secure online portals where participants can review consent forms and agree to them digitally.

Third-Party Sample Sources:

1. Third-Party Agreements: For participants sourced through third parties, we ensure these entities have robust consent mechanisms in place that align with our standards.
2. Integrated Systems: We integrate our consent management systems with those of our partners, ensuring a seamless consent process for participants.

Managing Consent Wholly Owned Sample Sources:

1. User Accounts: Participants can manage their consent preferences through their user accounts on our platform. This includes viewing current consents, withdrawing consent, and updating their preferences.
2. Customer Support: We provide dedicated customer support to help participants manage their consent. Support can be reached via phone, email, or live chat.

Third-Party Sample Sources:

1. Collaborative Management: We collaborate with third parties to ensure participants can manage their consent through the third-party platforms, with updates communicated to us.
2. Joint Support Channels: We establish joint support channels with third-party providers to assist participants in managing their consent.

Revising Consent Wholly Owned Sample Sources:

1. User Dashboard: Participants can revise their consent at any time through their user dashboard. This includes adding new consents or modifying existing ones.

2. Notifications: Participants are notified of any changes in data processing policies and are prompted to review and revise their consent if necessary.

Third-Party Sample Sources:

1. Synchronised Updates: We ensure that any changes to consent by participants on third-party platforms are synchronised with our systems in real-time.

2. Consistent Communication: Participants receive consistent communication from both our and third-party systems, ensuring they are aware of their ability to revise consent.

Support Channels Wholly Owned Sample Sources:

1. Help Centre: An extensive online help centre with FAQs, guides, and tutorials.
2. Customer Service: Dedicated customer service representatives available via multiple channels (phone, email, chat).

3. Feedback Mechanisms: Options for participants to provide feedback on the consent process and suggest improvements.

32. How do you track and comply with other applicable laws and regulations, such as those that might impact the incentives paid to participants?

Tracking and adhering to laws and regulations within **Infinity Research**, particularly concerning participant incentives, entails a series of essential actions:

1. Understanding Relevant Laws and Regulations:

Data Protection Laws: Acquaint yourself with data protection regulations like the GDPR (General Data Protection Regulation) in Europe, CCPA (California Consumer Privacy Act) in California, and other regional data privacy laws.

Incentive Regulations: Comprehend specific laws governing payments and incentives, which may vary across regions, encompassing tax implications, incentive limits, and restrictions on certain incentive types.

2. Regular Legal Consultation:

Legal Counsel: Engage with legal professionals specializing in market research and data privacy laws to stay informed about legislative changes.

Compliance Audits: Conduct routine audits with legal advisors to ensure alignment with current regulations.

3.Implementation of Compliance Initiatives:

Training Programs: Develop and sustain comprehensive training initiatives for staff to ensure comprehension and adherence to pertinent laws and regulations.

Internal Policies: Establish explicit internal policies outlining the handling, storage, and usage of participant data in compliance with legal mandates.

4.Data Management Practices:

Consent Oversight: Ensure participants provide informed consent for data collection and usage, including transparent communication about data utilisation and associated incentives.

Secure Data Storage: Enforce stringent data security protocols to safeguard participant data against unauthorised access or breaches.

5.Tracking and Documentation:

Incentive Records: Maintain meticulous records of all participant incentives disbursed, detailing amounts, payment methods, and recipient particulars.

Tax Compliance: Ensure accurate incentive reporting for tax purposes, adhering to legal requirements for both organisational and participant tax obligations.

6.Ethical Considerations :

Transparency: Maintain transparency with participants regarding research nature, their involvement, and incentives offered.

Equitable Practices: Ensure incentives are equitable and do not coerce participants into providing data or responses.

7.Technological Resources:

Compliance Tools: Employ compliance management software to monitor regulatory changes and streamline compliance procedures.

Secure Payment Platforms: Utilize secure and compliant payment systems for distributing participant incentives.

8.Industry Adherence:

Compliance with Standards: Uphold industry best practices and codes of conduct, such as those delineated by entities like ESOMAR (European Society for Opinion and

Marketing Research), MRSI(Market Research Society Of India) and the Infinity Association.

33. What is your approach to collecting and processing the personal data of children and young people? Do you adhere to standards and guidelines provided by ESOMAR or GRBN member associations? How do you comply with applicable data protection laws and regulations?

When collecting and processing personal data from children and young individuals, a meticulous and legally compliant approach is paramount, aligning with the standards and guidelines outlined by ESOMAR, GRBN, and relevant data protection legislation. Here is a comprehensive approach that **The Infinity Research** follows:

1.Understanding Relevant Laws and Guidelines

Data Protection Legislation: Familiarise yourself with regulations like COPPA (Children's Online Privacy Protection Act) in the US, GDPR in Europe, and other regional statutes that safeguard minors.

Industry Standards: Adhere to industry-specific best practices set by organisation's such as ESOMAR and GRBN, offering guidance on conducting research involving children and young individuals.

2.Obtaining Parental Consent

Parental/Guardian Approval: Obtain verifiable consent from parents or guardians before collecting data from minors below the consent age, usually 13 or 16 based on the jurisdiction.

Age Verification: Implement robust age verification procedures to ensure consent is obtained from underage participants.

3.Ethical Considerations

Transparency: Clearly articulate the data collection purpose and usage to children and their guardians in straightforward language.

Limited Data Collection: Gather only essential data required for research objectives, minimising the quantity and sensitivity of personal information gathered from minors.

4.Data Management and Security

Data Anonymisation: Anonymise or pseudonyms data when possible to protect the identities of child participants.

Secure Storage: Safeguard personal data of minors through secure storage practices, limiting access to authorised personnel.

5. Adherence to ESOMAR and GRBN Guidelines

ESOMAR Guidelines: Adhere to ESOMAR's directives on engaging with children and young individuals in research, emphasising ethical considerations, consent acquisition, and participant well-being.

GRBN Guidelines: Follow GRBN's frameworks, providing comprehensive guidance on safeguarding data and rights of minors in research.

6. Compliance with Data Protection Laws

COPPA Compliance: Ensure compliance with COPPA regulations for research involving children in the US by securing parental consent, offering transparent privacy notices, and permitting parents to review and delete their child's information.

GDPR Compliance: Comply with GDPR for research in Europe by ensuring consent is freely given, specific, informed, and unambiguous, and that data processing is lawful and transparent.

7. Monitoring and Updating Procedures

Routine Assessments: Regularly evaluate and update data collection methods to maintain compliance with evolving laws.

Training: Offer continuous staff training on legal obligations and ethical considerations related to collecting data from minors.

34. Do you implement "data protection by design" (sometimes referred to as "privacy by design") in your systems and processes? If so, please describe how.

In **The Infinity Research**, implementation of "data protection by design" (or "privacy by design") is essential for safeguarding the security and confidentiality of personal data throughout its entire lifecycle. Here is a comprehensive guide on achieving this objective:

1. Principles of Data Protection by Design:

Proactive Approach: Address privacy issues before they arise.

Default Privacy Setting: Ensure automatic protection of personal data in all systems.

Embedding Privacy: Integrate privacy measures into system design.

Full Functionality: Accommodate all interests while upholding privacy.

End-to-End Security: Implement robust security measures from data collection to disposal.

Transparency: Maintain openness about data practices to foster trust.

User Privacy Respect: Prioritise user interests in data handling.

2.Implementation Steps:

Data Mapping: Identify data flow for targeted protection.

Risk Assessment: Conduct DPIAs to mitigate privacy risks.

Minimisation and Pseudonymization: Collect only necessary data and anonymize identities.

Access Controls: Restrict data access to authorised personnel.

Encryption: Safeguard data in transit and at rest through encryption.

Audits and Reviews: Regularly assess data protection measures for compliance.

3.System Design and Development:

Secure Development Lifecycle: Integrate privacy and security at each system development phase.

User-Centric Controls: Design interfaces for easy privacy settings management.

Default Privacy Settings: Configure systems with privacy-centric defaults.

4.Policies and Procedures:

Data Protection Policies: Establish comprehensive policies reflecting privacy by design principles.

Employee Training: Educate staff on privacy by design importance. Incident Response

Plans: Develop plans prioritising data protection during breaches.

5.Monitoring and Maintenance:

Continuous Monitoring: Regularly monitor systems for potential vulnerabilities.

Updates and Patches: Keep software up-to-date to mitigate security risks.

Incident Response: Periodically test and refine incident response plans to enhance readiness.

6. User Engagement and Feedback:

User Education: Inform users about their privacy rights and how to manage settings.

Feedback Mechanisms: Encourage user feedback to improve data protection measures.

Transparency Reports: Provide regular reports on data protection activities to build trust.

35. What are the key elements of your information security compliance program? Please specify the framework(s) or auditing procedure(s) you comply with or certify to. Does your program include an asset-based risk assessment and internal audit process?

A robust information security compliance program encompasses various essential components to safeguard data and comply with pertinent standards and regulations in **Infinity**. Here is a detailed overview of these key elements :

1. Governance and Management

Information Security Policies: Establish and uphold comprehensive information security policies and procedures outlining the organisation's stance on data protection, access controls, incident response, and regulatory compliance.

Security Leadership: Designate a Chief Information Security Officer (CISO) or a similar role tasked with supervising information security initiatives and ensuring alignment with the organisation's objectives.

2. Risk Management

Asset-Centric Risk Assessment: Conduct routine risk assessments based on assets to identify and assess risks associated with information assets, encompassing data, hardware, software, and personnel. This evaluation aids in recognising potential threats and vulnerabilities unique to each asset.

Risk Mitigation Plans: Formulate and execute risk mitigation plans derived from risk assessments, integrating strategies for risk mitigation and contingency planning.

3. Internal Audit and Monitoring

Internal Audit Procedures: Deploy a robust internal audit regimen to periodically review and evaluate information security controls, policy compliance, and adherence to regulatory mandates. Regular audits ensure efficacy, pinpoint weaknesses, and suggest enhancements.

Continuous Monitoring: Employ continuous monitoring tools and methodologies to swiftly identify and respond to security incidents, vulnerabilities, and compliance deviations.

4.Access Controls and Data Protection

Access Management: Enforce stringent access controls to restrict sensitive information access solely to authorised personnel. Implement role-based access controls (RBAC) and multi-factor authentication (MFA) as needed.

Data Encryption: Employ data encryption for sensitive data in transit and at rest to thwart unauthorised access and data breaches.

5.Incident Response and Management

Incident Response Plan: Develop and maintain an incident response plan to promptly and efficiently handle security breaches or incidents. This plan should encompass detection, containment, eradication, and recovery procedures.

Incident Reporting: Establish clear protocols for reporting security incidents internally and externally to regulatory bodies when obligatory.

6.Training and Awareness

Employee Training: Conduct regular security awareness training sessions for all staff to educate them on information security policies, protocols, and best practices, including phishing awareness and secure data handling techniques.

Continuous Education: Provide ongoing educational sessions and updates to keep employees abreast of emerging threats and evolving security methodologies.

36. Do you certify to or comply with a quality framework such as ISO 20252?

Certifying compliance with a quality framework such as ISO 20252 is imperative for upholding the highest standards in market, opinion, and social research. Here is a comprehensive guide on how to implement compliance with ISO 20252:

Understanding ISO 20252: ISO 20252 serves as an international benchmark that outlines the prerequisites for a quality management system in market, opinion, and social research. It encompasses all research phases, spanning from project inception to completion, encompassing facets like data collection, processing, and dissemination.

Implementation Process:

Conducting a Gap Analysis:

Evaluate Current Practices: Conduct an in-depth analysis to compare existing methodologies with the stipulations of ISO 20252.

Identifying Areas for Enhancement: Identify inadequacies in current practices to align them with the standard requirements.

Establishing a Quality Management System (QMS):

Development of a Quality Manual: Formulate a quality manual delineating policies and procedures in accordance with ISO 20252.

Documentation of Processes: Document all research processes with precise instructions and quality checkpoints at every juncture.

Training and Awareness:

Employee Training: Deliver comprehensive training to all staff members on ISO 20252 standards, policies, and procedures.

Continuous Education: Introduce ongoing educational initiatives to keep the workforce abreast of evolving best practices and standard updates.

Quality Assurance Protocols:

Routine Audits: Conduct periodic internal audits to verify ISO 20252 compliance and rectify any deviations promptly.

Feedback Mechanisms: Establish feedback channels and mechanisms for continuous improvement, involving all stakeholders.

Data Governance:

Data Integrity: Implement stringent data management protocols to ensure the precision, trustworthiness, and confidentiality of collected data.

Robust Systems: Emphasize the use of secure data collection and storage systems that adhere to stringent security measures to fortify against breaches and data compromise.

Metrics

What this section is about

This section lists common sample and data health metrics. Reviewing metrics periodically can serve as the basis for a conversation with sample providers about consistency and reliability, as well as whether the sample is appropriate for the population and business question being examined. Unexpected or unexplained shifts in metrics may also indicate the potential for bias or error. While not all of these metrics are required and there are no benchmarks on the “right answers,” providing transparency over time will create a meaningful dialogue about quality and utility.

37. Which of the following are you able to provide to buyers, in aggregate and by country and source? (Information as per single study)

01. Average qualifying or completion rate, trended by month

Ans. **Infinity** majorly use a simple formula for taking out the Qualifying or Completion rate and to be transparent we will share the same here.

Qualifying Rate: This is the percentage of participants who qualify to take the survey out of those who were invited.

Qualifying Rate=(Number of Qualified Participants/Number of Participants Invited)×100

Completion Rate: This is the percentage of participants who complete the survey out of those who started it.

Completion Rate=(Number of Completed Surveys/Number of Surveys Started)×100

Month	Participants Invited	Qualified Participants	Completed Surveys	Qualifying Rate (%)	Completion Rate (%)
January	1000	800	600	80%	75%
February	1200	900	700	75%	78%
March	1100	850	650	77%	76%

April	1300	950	720	73%	76%
-------	------	-----	-----	-----	-----

02. Percent of paid completes rejected per month/project, trended by month

Ans. **Infinity** follow the Rejection Rate Formula: The percentage of paid completes rejected can be calculated using the formula:

Rejection Rate=(Number of Rejected Completes/Total Number of Completes)×100

Month	Total Completes	Rejected Completes	Rejection Rate (%)
January	1000	50	5.0%
February	1200	70	5.8%
March	1100	60	5.4%
April	1300	80	6.1%

03. Percent of members/accounts removed/quarantined, trended by month

Ans. **Infinity Research** percent falls to 10% every quarter as we uphold a stringent policy regarding the removal of members who deviate from our established rules and regulations, prioritising the advancement of the community through constructive efforts over personal gains. Consequently, every three months, individuals receive warnings or cautions based on their conduct, leading to potential removal.

Our commitment to fostering a healthy and productive community underscores our dedication to monitoring member behavior vigilantly. Those who breach our guidelines are swiftly addressed to maintain the integrity of our platform. This rigorous approach ensures

a positive and conducive environment for all community members to engage meaningfully. By tracking the percentage of members or accounts removed or placed under quarantine monthly, we gain Infinity into trends and can proactively uphold a supportive and collaborative atmosphere.

04. Percent of paid completes from 0-3 months tenure, trended by month.

Ans. **Infinity Research** has successfully fulfilled 90% of payments within the past three months, underscoring our steadfast commitment to prioritizing quality. Even in situations where our esteemed panelists face rejection, we make it a point to provide feedback along with a voucher, fostering a sense of loyalty and dedication. Emphasising transparency and equity, we strive to ensure that each panelist feels acknowledged and valued for their efforts. Continuously refining our procedures and standards is a key aspect of our approach to reduce rejections and elevate satisfaction levels. Upholding our dedication to collecting high-quality data and nurturing panelist loyalty is paramount, recognising the critical role data integrity plays in delivering meaningful and dependable Infinity to our clientele.

05. Percent of paid completes from smartphones, trended by month

Ans. **Infinity** panellist are open to work with any devices while running the survey mostly come under Desktop and then the Smartphones.

Month	Total Paid Completes	Paid Completes from Smartphones	Percentage of Paid Completes from Smartphones
January	1000	300	30%
February	1200	360	30%
March	1100	385	35%
April	1300	455	35%

06. Percent of paid completes from owned/branded member relationships versus intercept participants, trended by month

Ans. Owned/Branded Member Relationships: Participants recruited through direct relationships with your brand or organisation.

Intercept Participants: Participants recruited through intercept methods, such as inperson recruitment or online ads targeting specific demographics.

Month	Total Paid Completes	Paid Completes (Owned/ Branded)	Paid Completes (Intercept)	Percentage (Owned/ Branded)	Percentage (Intercept)
January	1000	600	400	60%	40%
February	1200	720	480	60%	40%
March	1100	660	440	60%	40%
April	1300	780	520	60%	40%

07. Average number of dispositions (survey attempts, screenouts, and completes) per member, trended by month (potentially by cohort)

Ans. **Infinity Research** collect data on the number of survey attempts, screen outs, and completes for each members. We ensure this data is categorised by month and, if relevant, we break down the data by cohort (e.g., participants recruited in different periods or groups) to analyse trends within specific segments.

Month	Total Members	Survey Attempts	Screen outs	Completes	Average Survey Attempts	Average Screenouts	Average Completes
January	1,000	2,000	500	800	2	0.5	0.8
February	1,200	2,400	600	900	2	0.5	0.75

March	1,100	2,200	550	850	2	0.5	0.77
April	1,300	2,600	650	950	2	0.5	0.73

08. Active unique participants in the last 30 days

Ans. **Infinity** regularly assess our active panels every three months to accurately categorize the members actively engaged in our panel. Notably, as of March 2026, our active panel is as follows:

Country	Active Unique Participants
North America	25000
EMEA	22000
APAC	27000
LATAM	18000
MENA	15000

09. Active unique 18-24 male participants in the last 30 days

Country	Active Unique Participants
North America	5000
EMEA	4400
APAC	5400
LATAM	3600
MENA	3000

10. Maximum feasibility in a specific country with nat rep quotas, seven days in field, 100% incidence, 10-minute interview

Ans. If **Infinity Research** have to conduct Gen-Pop sampling with a 100% incidence rate and a 10- minute length of interview (LOI) in the United States over a seven-day period, we could anticipate collecting a minimum of 1000 samples. Extending this study to India could potentially double the sample size to approximately 2000. Conversely, countries like France, Germany, and Italy would likely yield around 900 samples each.

Moreover, exploring Middle Eastern territories such as the United Arab Emirates, Iran, Turkey, and Oman could result in acquiring at least 700 samples within the same seven-day timeframe.

In parallel, within Southeast Asia, countries like Malaysia, Singapore, and Thailand may offer approximately 800 samples each.

Transitioning to Latin America, countries like Brazil and Mexico exhibit the potential to provide around 850 samples each. Meanwhile, in African countries such as South Africa and Nigeria, a projection of about 750 samples is feasible.

It is important to note that in smaller European nations like Belgium, the Netherlands, and Sweden, the expected sample sizes range from 600 to 700, reflecting their population sizes and online participation rates.

While the sample sizes vary across regions and countries, maintaining consistent parameters such as quotas and field days is essential to ensure the data collected is representative and reliable across diverse geographical locations.

Glossary

For the purpose of this document these terms have the following specific meanings:

Affiliate partner (or Affiliate network) means a network of communities with which a sample provider has a relationship to direct intercept traffic to their surveys.

API (application programming interface) means a set of definitions and protocols for building software applications capable of accessing and exchanging data.

Blending means the practice of combining multiple, heterogeneous sample sources with the aim of achieving a more consistent or more representative sample.

Children mean individual for whom permission to participate in research must be obtained from a parent, legal guardian, or responsible adult. Definitions of the age of a child vary substantially and are set by national laws and self-regulatory codes. In the absence of a national definition, a child is defined as being 12 and under and a “young person” as aged 13 to 17.

Completion Rate means the number of participants who fully complete the survey divided by the number of participants who start the survey.

Consent means freely given and informed indication of agreement by a person to the collection and processing of his/her personal data. Note that the specific requirements for consent will vary by jurisdiction.

Exclusion means excluding a potential participant from a research project based on their previous participation in a research project involving the same or similar product/ser vice category and/or methodology.

Fraudulent Participant means a participant who deliberately misrepresents their identity, profiling information, or responses, including organisations that use bots to impersonate participants.

Health Metrics means measures of quantitative assessment commonly used for comparing and tracking performance or production over time. In this context, health metrics refers to quantitative data used to track stability or changes in the sample a provider offers, and the metrics suggested are based on data that has been previously known to impact quality over time.

Loyalty Programme means an arrangement in which customers of a company (or group of companies) are rewarded for purchases made with these companies. Rewards are normally given in a currency that can be spent at those companies (or their chosen partners).

Paid Completes means interviews/surveys that are delivered and accepted by a client, are included in the final dataset, and for which the sample provider receives payment

Panel Member (or simply member) means an individual recruited from a documented source who has provided profile data and appropriate information for validation of identity, given explicit consent to participate in research according to the terms and conditions of panel membership, and has not opted out.

Participant (sometimes call a participant or data subject) means a person or organisation from whom or about whom data is collected for research.

Personal Data (sometimes referred to as personally identifiable information or PII) means any information relating to a natural living person that can be used to identify an individual, for example by reference to direct identifiers (such as a name, specific geographic location, telephone number, picture, sound, or video recording) or indirectly by reference to an individual's physical, physiological, mental, economic, cultural or social characteristics.

Profiling Information means descriptive characteristics of a panel member.

Quarantined Members means individuals who have broken some set of quality assessment protocols that result in them being either temporarily or permanently suspended from participating in future research activities with the company that quarantines them.

Referral Program means a process whereby a panel offers its existing panellists the opportunity to gain rewards by referring family, friends and colleagues (or visitors of their site) to join the panel.

Representativeness means the degree to which a sample reflects the target population being studied. A representative sample is one in which the distribution of important characteristics is approximately the same as in the target population.

Rewards community (within Get Paid To (or GPT) sites) means databases or panels of individuals who may undertake non-research activities (watch ads, download an app, complete marketing offers etc) usually in exchange for a reward, but who also agree to take part in research projects.

Router means an online software application that screens incoming research participants and then uses those results to assign participants to one of multiple available research projects. A router can also offer participants additional screeners and surveys after screener qualification failure or survey completion.

Sample Provider means a service provider responsible for the provision and management of online samples from relevant sources including panels, intercepts, email lists, etc.

Survey Attempts means the number of times the same individual clicked a link or entered into a survey environment in an attempt to complete a survey.

Third Party Sources means sources that the sample provider does not directly run or control.

Yield Management means a variable allocation strategy through which outcomes are maximised by matching supply with demand.
